

Pertamina's Path to Sustainability

Key Milestones and Achievements

As the leader in Indonesia's energy sector, Pertamina is committed not only to fueling the nation but also doing it in a more sustainable manner. As per 2024, Pertamina has made meaningful milestones on its path to actualize a more sustainable and environmentally responsible future, including:

SPBKLU – EV Ecosystem

92 units of Battery Swapping Stations (SPBKLU)

have been installed at Pertamina Gas Stations - from 160 units of total 2024' target. As the number of electric vehicles continues to grow, Pertamina is committed to enhancing its EV ecosystem. These installations are marking a significant ESG achievement for the year.

Pertamax Green

97 distribution channels

of Pertamax Green 95 are available across East Java, Jakarta, Banten, and West Java. **Pertamax Green 95 is an environmentally friendly vehicle fuel with 5% bioethanol from renewable raw materials that equivalent with Euro 4 standards.** This channel expansion underscores our commitment to increase access and availability of sustainable fuel and to capture market share in key regions.

Sustainable Aviation Fuel (SAF)

1st commercial flight

was achieved on October 27, 2023 using Pertamina Sustainable Aviation Fuel (SAF) in collaboration with Garuda Indonesia. On August 8th, 2024, Pertamina Patra Niaga became the first operator in Southeast Asia to offer ISCC CORSIA-certified SAF and in compliant with ISCC RED-EU standard - reinforcing our leadership in SAF production in the region.

On August 8th, 2024, Pertamina Patra Niaga became the first operator in Southeast Asia to offer ISCC CORSIA-certified SAF and in compliant with ISCC RED-EU standard - reinforcing our leadership in SAF production in the region.

Geothermal

55 MW additional capacity

from 'on-progress Lumut Balai Unit 2' Geothermal project will contribute to the existing Lumut Balai Unit 1, which would bring total capacity of 110 MW from both units upon completion. As per June 2024, **Lumut Balai-Unit 2 Geothermal' construction is at 77.19% from completion** and is expected to reach Mechanical completion by December 2024.

CCS/CCUS

11 ongoing CCS/CCUS projects

including several CCS Hub development initiatives in Asri, Kutai & Central Sulawesi Basin and CCUS - EOR & EGR projects in Jatibarang, Gundih and Sukowati field.

CCUS initiatives including 'CO2 to Methanol' project in Ulubelu & Balikpapan, 'CO2 to PCC' from Gas Subang & 'CO2 Reforming of Methane' in East Java. Following successful Phase 1 Huff & Puff CO2 Injection in 2023, Pertamina signed a JSA in August 2024 for Phase 2 Inter-Well CO2 Injection at Sukowati field. Injection test will commence in Q4 2024.

Carbon Credit Sales

566,361 tons of CO2e

of actual sales volume has been sold through IDX Carbon as of August 2024. Pertamina NRE's carbon credits is now dominating 92% of the carbon credit market in Indonesia.

Solar

51,65 MW of solar energy

of solar energy is currently installed including one of the largest Solar PV Project in Upstream PLTS Rokan 26,7 MW. PNRE solar capacity is projected to increase to 53,2 MW by Desember 2024.

LPG - Fueled Ships

5 VLGC dual-fuel ships

each equipped with advanced Dual Fuel LPG technology with capacity of approximately ~ 88-89 m³ are currently operated by Pertamina. One vessel (Amaryllis) was delivered in February 2023, and the remaining four vessels (Tulip, Bergenia, Caspia and Dahlia) were delivered in January, March and May 2024.

These vessels equipped with energy-saving devices and shaft generators & also Selective Catalytic Reduction (SCR) systems, enhancing fuel efficiency and reduce carbon emissions and acid rain pollution (Nox) pollutants.

Building on our existing milestones, Pertamina is actively engaging with various partners to enhance our ESG activities especially in Methane abatement. The key milestones are including:

Pertamina is part of the **UNEP's Oil & Gas Methane Partnership (OGMP) 2.0** as the **ONLY company in Indonesia to join the initiative as of May 2024**. This membership aligns Pertamina with the Global Methane Pledge's goal of reducing global methane emissions by at least 30% from 2020 levels by 2030 – reflecting our strong commitment to sustainable practices and supporting global climate targets.

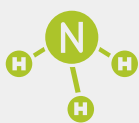

Pertamina signed JSA with the **Japan Organization for Metals and Energy Security (JOGMEC)** at the **2nd AZEC event in August 2024** – marking Pertamina's initiative in further enhancing cooperation in the measurement and quantification of methane emissions.

Pertamina became the **57th company to endorse the World Bank's Zero Routine Flaring by 2030 initiative**. As of **May 2024**, Pertamina has joined the initiative with a total of 108 commitments aimed at eliminating wasteful and polluting flaring practices.

Pertamina is also advancing several ESG-related projects, reflecting our strong commitment to environmental, social, and governance principles. These initiatives are crafted to drive sustainable growth and deliver long-term value, aligning with global standards and investor expectations. Below are some examples of our ESG-related projects:

Blue Ammonia Bintuni

833,000 tons/year
of low-emission ammonia

is expected to be produced through the preliminary project in West Papua, Bintuni. It is anticipated to cut CO2 emissions by 70%. Blue ammonia is produced from nitrogen and blue hydrogen, which is derived from natural gas feedstocks with CO2 by-product captured and stored.

Jakarta Integrated Green Terminal

6 million-barrel
storage capacity

of **Jakarta Integrated Green Terminal (JIGT)** in Tanjung Priok – Jakarta, is expected to handle various energy products, including fuels, LNG, and Hydrogen in near future. Boasting a **50 hectare**-wide facility, JIGT incorporates ESG principles and carbon neutrality practices to align with global sustainability standards and future energy needs.

Green Refinery RU III

20,000 barrels/day

capacity of the **new biorefinery plant in Palembang, South Sumatra** will enhance the supply of sustainable fuels, such as HVO and SAF.

Green Refinery RU IV

6,000 barrels/day

capacity of the **new biorefinery plant in Cilacap, Central Java** is aiming to increase the supply of sustainable fuels, such as HVO and SAF.
